

CUSTOMER CASE TREYVE PAYSAGES

URBAN LANDSCAPING: ONE GRAPPLE. ENDLESS POSSIBILITIES.

» What impresses me most about the GRX 10-5 is the ratio between its weight and its opening capacity. You can pick up incredibly large bundles of material, and it saves a huge amount of time on site without reducing the lifting capacity of the mini excavator. Today, every operator wants to get their hands on the grapple! »

Mathieu - TREYVE PAYSAGES

BACKGROUND

In France, urban landscaping requires working in highly constrained environments: narrow access, proximity to residential areas, and fast-paced job sites with limited room to maneuver.

In this context, mini and midi excavators have become essential tools. However, their performance relies directly on the attachments used.

On this type of machine, every kilogram matters. An attachment that is too heavy, immediately impacts stability, precision, and the machine's effective lifting capacity.

INDUSTRY Urban Landscaping

SERVICES Landscape design, tree care

THE CHALLENGE

In real working conditions, the limitations of conventional solutions quickly become apparent:

- Buckets or buckets with thumbs are inefficient when handling logs, timber sections, rock placement materials, or brushwood
- Lack of precision at full reach
- Frequent need for additional movements and machine repositioning
- Manual handling of pruning residues and branches, which is time-consuming and physically demanding

In practice, this results in significant time loss, reduced productivity, and increased operator fatigue.

THE SOLUTION

The **GRX** range has been specifically developed for excavators from 1.5 to 18 tonnes, with a clear objective: maximize efficiency while maintaining machine stability and precision.

The **GRX 10-5**, with its 5-finger design, is an extremely versatile tool capable of handling logs, timber sections, rock placement materials, brushwood, kerbs, and other difficult-to-handle items.

Its weight of just 66 kg is made possible through the use of high-performance steels:

- **Hardox®** for the claws, ensuring excellent wear resistance
- **Strenx® 700** for the frame, providing high strength and rigidity with minimal material

This combination results in a grapple that is lightweight, durable, and perfectly suited for compact excavators.

THE RESULT ON SITE

SIGNIFICANT TIME SAVINGS

Faster and more efficient handling compared to a bucket, a sorting grab or bucket with thumbs.

FULL VERSATILITY

One tool for logs, timber sections, tree pruning waste, rock placement materials, brushwood, kerbs, and other complex items to handle.

ELIMINATION OF MANUAL HANDLING

No more picking up branches and pruning residues by hand.

REDUCED FATIGUE AND PHYSICAL STRAIN

Less manual work means less back pain and improved operator comfort.

IMPROVED PRECISION AND STABILITY

Clean, controlled operation—even at full reach—with a well-balanced machine

GRX®
BY INTERMERCATO

CONCLUSION

With a grapple like the **GRX 10-5**, how work is carried out on site changes completely.

- ☒ One tool for all applications
- ☒ Less time wasted
- ☒ Reduced physical strain for operators
- ☒ Full utilization of the machine's capabilities

In industries where productivity and operator fatigue matter just as much as precision, the choice of attachment makes a real difference.
