CUSTOMER CASE

KRISTIANSTAD DJURTRANSPORTER AB

ACCURATE WEIGHING IN FALLEN LIVESTOCK COLLECTION

SPECIALIST IN FALLEN LIVESTOCK COLLECTION

THE CUSTOMER

Based in southern Sweden, **Kristianstad Djurtransporter AB** specializes in the collection and transport of fallen livestock, emergency slaughter services and the handling of slaughterhouse by-products.

The company operates in a demanding industry where efficiency, reliability and accurate documentation are essential. With over **1,000 collections every month** – reaching up to 1,400 during peak periods – every collection needs to be handled efficiently, from the initial pickup to final weight registration.

Operating three collection trucks with a team of five operators, Kristianstad Djurtransporter relies on equipment that can withstand intensive daily use while supporting a smooth and reliable workflow.

EVERY KILOGRAM COUNTS

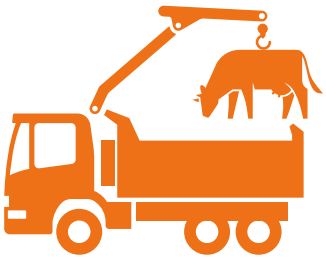

THE CHALLENGE

In fallen livestock collection, weighing is more than an operational requirement. It is a fundamental part of the commercial process.

Farmers are charged according to the weight of the animals collected, making accurate weighing **essential for transparent and correct invoicing**.

With hundreds of individual customers and a high volume of collections, manually managing weight records and customer information would add unnecessary administration and increase the risk of errors.

At the same time, the equipment must perform reliably in a challenging working environment, handling everything from pigs, sheep and poultry to larger animals such as cattle.

THE CHALLENGE IS CLEAR

Combine accurate weighing, efficient handling and reliable customer documentation without interrupting the daily workflow.

INTEGRATED WEIGHING AND DIGITAL DATA MANAGEMENT

THE SOLUTION

Kristianstad Djurtransporter has trusted **Intermercato Intelligent Weighing Systems** since approximately 2007.

Today, all of the company's collection trucks are equipped with **Intermercato RC5 weighing systems, combined with TG22 grapples, rotators and links** to provide an integrated solution for handling and weighing animal carcasses.

Rather than treating weighing as a separate operation, the system allows weight registration to become a natural part of the collection process.

Each recorded weight is connected to the relevant customer through a digital customer register, ensuring that collection information is accurately documented and linked to the correct transaction.

This creates an efficient digital workflow, reducing manual administration and providing reliable weight data for invoicing and follow-up.

The equipment is designed to meet the demands of the working environment. Improved surface treatment and increased durability help ensure reliable performance under intensive operating conditions.

Another valuable feature is the ability to **calibrate the weighing system directly in the field**, helping operators maintain accuracy while minimizing unnecessary downtime.

By integrating Intermercato weighing technology into its daily operations, Kristianstad Djurtransporter has reached an efficient, digitally connected collection process.

OIML

The world's only certified and type-approved scale for hanging load in motion.

THE RESULT

ACCURATE WEIGHING FOR CORRECT INVOICING

Reliable weight data provides a transparent basis for weight-based customer charges.

LESS ADMINISTRATION, BETTER TRACEABILITY

Digital customer registers connect each collection and its recorded weight to the correct customer, simplifying documentation and invoicing.

COMPLETE SOLUTION FOR EFFICIENT HANDLING

Intermercato provides a complete solution combining grapples, rotators, links and weighing technology – designed to ensure safe, efficient handling and accurate weighing throughout the collection process.

RELIABILITY IN DEMANDING CONDITIONS

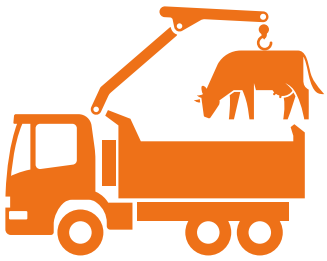

Durable equipment and the possibility of field calibration help maintain consistent performance and reduce operational interruptions.

A LONG-TERM SOLUTION BUILT ON RELIABILITY

After nearly two decades of using Intermercato weighing technology, **Kristianstad Djur-transporter** demonstrates how accurate weighing and digital information management can support an efficient collection operation.

When every kilogram affects invoicing, dependable weight information is essential – not only for the transport operator, but for everyone involved in the process.

”When you handle over a thousand collections every month, there's no room for guesswork. We need accurate weights, reliable equipment and a system we can trust – every single day.”

Julius Mårtensson - Department manager, Kristianstads Djurtransporter AB
